Breakthrough for PulpEye in Canada

A big breakthrough for Eurocon Analyzer's products in Canada!

That is the way to describe the order of multiple units of the advanced online pulp analyzer PulpEye, that was sold to Canfor Pulp Limited Partnership with delivery during the summer of 2011.

- "1000's of engineering hours are behind our products and we are very proud and honored by the trust given to us by Canfor in Canada", says Öjvind Sundvall at Eurocon Analyzer in Örnsköldsvik, Sweden.

-" The opportunity to further differentiate our premium reinforcement pulp in the global market is a strategic imperative for CPLP. PulpEye is one of the 3 technology pillars of our innovative Mihari program", says Joe Nemeth, CEO Canfor Pulp Limited Partnership, Canada.

Canfor Pulp is a leading supplier of high quality northern bleached kraft pulp and paper products in the world. The company has decided to invest in the PulpEye as the platform for future online measurement needs. The analyzers will be installed at the three mills in and around Prince George, BC, and at the new research facility in Vancouver, BC.

PulpEye is based on the latest technology and is carrying out accurate measurements with high frequency, which is required to monitor and control important quality parameters for the process and for customers. All of this will result in lower production costs and more stable quality.

The sensor technology company Eurocon Analyzer, that was incorporated in 2002, is the leader of the analyzer segment in Sweden. The company is also represented in Germany and UK.

- "We have also had representation in North America since 2002 focused on service and support of older analyzer equipment. This order to Canfor will set the start for a drive to place new products as the PulpEye in Canada and USA", continues Mr. Sundvall.

Included in the delivery to Canfor are all our existing measuring modules, including four kappa modules, a total of five analyzers and a total of 24 sampling points.

-"Our own personnel are stationed in Ottawa, ON, and Vancouver, BC. They are focused on marketing, service and support, these new installations will further strengthens our cooperation with Canfor", finishes Mr. Sundvall.
